(a) Redundancy vs system size
5–95% of subsets
95% bootstrap CI of mean
mean Ω(S_k)
surrogate null (k = 3, 10, 20)
Ω(S_k) (nats)
system size k
null ×10^4
(b) Local scaling exponent
95% bootstrap CI
local exponent
global fit β = 2.12
ΔlnE[Ω] / Δln k
system size k (midpoint of k, k+1)
